Portfolio : iammuaz.com

Principal Game Engineer with nearly 10 years of experience in game development, building real-time interactive systems, multiplayer platforms, and scalable game backend services. Specialized in gameplay architecture, client-server systems, networking, and cloud-integrated applications using Unity, C#, Unreal, Node.js, and .NET.

Skills

Programming	C#, C++, TypeScript, JavaScript, Lua
Game Engines	Unity (Primary Engine), Unreal Engine (Working Knowledge), Roblox
Unity & Gameplay	ECS, Addressables, Dependency Injection, Scriptable Objects, Editor Tooling, Shader Graph, Unity Profiler, Performance & Memory Optimization
Multiplayer	Photon PUN/Fusion/Quantum, Mirror, Colyseus, Client-Server Architecture, Server-Authoritative Game Architecture, State Synchronization
Backend	Node.js, .NET, REST APIs, WebSockets, Microservices
LiveOps & Services	Firebase, PlayFab, Remote Config, Analytics, Monetization, LiveOps
Cloud & Infra	AWS (DynamoDB, S3, CloudFront, Cognito), Docker, CI/CD
Architecture	Distributed Systems, Event-Driven Architecture, Scalable System Design, SOLID, Design Patterns, Clean Architecture
Tools & Delivery	Git, JIRA, Agile/Scrum, Technical Planning, Architecture Reviews, Code Reviews

Professional Experience

Present – Jan 2026

Technology & Solution Consultant, Starke Enterprise, Remote (Netherlands)

- Advise clients and technical teams on solution architecture, technology selection, and implementation strategies across game development, backend, web, and DevOps.
- Design technical solutions for production projects and prototypes/POCs using Unity, Roblox, backend services, and web technologies.
- Translate product and business requirements into technical architecture, development plans, and scalable implementation approaches.
- Guide client teams through technology evaluation, architectural decisions, technical planning, and development strategy.

Solution Architecture | Unity | Roblox | Backend | DevOps | Web

Present – May 2025

Independent Game & Software Engineer, Self-Employed, Remote

- Deliver game development, architecture consulting, backend engineering, and technical advisory services for client projects and independent products.
- Design gameplay systems, multiplayer architectures, backend services, and scalable technical solutions from concept through implementation.
- Work directly with clients on requirements discovery, technical planning, architecture, development, and delivery.

Game Development | Architecture | Backend | Client Delivery

Professional Experience (continued)

Jan 2026 – Dec 2022 | Technical Lead, Salvay, Remote (USA)

- Led architecture and technical direction for real-time multiplayer game systems across 6+ shipped titles.
- Provided technical leadership for a development team of 10+ members, guiding architecture, performance, implementation decisions, and engineering quality.
- Architected server-authoritative multiplayer systems using Colyseus and TypeScript, supporting real-time competitive gameplay and persistent player progression.
- Designed scalable gameplay, networking, backend, and cloud-integrated systems for production game environments.
- Collaborated with product, game design, QA, and engineering teams to translate gameplay requirements into scalable technical solutions.

Multiplayer | Colyseus | TypeScript | Server-Authoritative Architecture | Team Leadership

May 2025 – Dec 2020 | Principal Software Engineer, CLV Technologies, Lahore, Pakistan

- Led technical architecture and development across 10+ shipped game projects for international clients.
- Provided technical leadership and architectural guidance across development teams of 20+ engineers.
- Designed and developed scalable game systems and real-time interactive applications using Unity and Unreal Engine.
- Led prototype and proof-of-concept development to validate gameplay mechanics, technology choices, and architecture feasibility before production.
- Designed client-server architectures, multiplayer frameworks, and backend integrations for production game experiences.
- Participated in technical discovery, architecture reviews, project planning, and cross-team delivery with international stakeholders.

Unity | Unreal | Client-Server Systems | Multiplayer | Backend Integration | Technical Discovery

Dec 2020 – Dec 2019 | Senior Game Developer, Gaminations, Lahore, Pakistan

- Developed core gameplay systems and production mobile games using Unity and C#.
- Implemented gameplay mechanics, UI systems, and player-facing features.
- Profiled and optimized runtime performance for mobile platforms.
- Collaborated with game design, QA, and engineering teams through Agile development workflows and Git-based version control.

Unity | C# | Mobile Games | Performance Optimization | Agile

Nov 2019 – Jan 2019 | Senior Game Developer, United We REACH, Pakistan

- Developed Unity-based educational games and interactive mobile applications.
- Implemented gameplay systems, UI flows, player interactions, and client-server features.
- Collaborated with web, mobile, QA, design, and content teams to deliver educational game experiences.

Unity | Educational Games | Client-Server | UI Systems

Dec 2018 – Jul 2017 | Freelance Game Developer, Self-Employed, Remote

- Developed Unity-based mobile games and gameplay systems for client projects.
- Delivered gameplay features, UI systems, optimization, and deployment support.

Unity | Mobile Games | Gameplay Systems

Jun 2017 – Dec 2016 | Game Developer, Center for Game Design, University of Central Punjab

- Developed game-based educational applications using gameplay-driven learning systems.
- Led a small development team in building interactive educational game experiences.

Interactive Learning | Game Development | Team Leadership

Education

BS Computer Science | University of Central Punjab
